

Why is React known as React?

Because React.js react to every state changes.

What is Emmet?

Emmet is a free plugin for text editors to write HTML and CSS code faster and saves time.

What is CDN?

A CDN (Content Delivery Network) is a group of servers spread out over many locations.

Goal of CDNs is to make fast service less affected by high traffic.

CDN allows quick transfer of assets needed for loading Internet content including HTML pages, JS files, stylesheets etc.

What is the difference between dev and prod files?

These files are basically used for performance reasons.

Production links are optimized and minified versions of React while Dev files are only meant for development and take time as compared to prod files which are not suitable for better user experience.

What is the use of crossorigin while adding external scripts?

Crossorigin attribute enables CORS that allows resources on a web page to be requested from another domain outside their own domain.
